November 2026

1. Users and what the design must support

Koru is a Turkish mobile app for small, recurring, in-person **book clubs**, typically 5–15 members meeting every week or two. Members open the app on their phone a few times per week for short, specific jobs: *When and where is the next meeting? Am I coming? Rate the book. Vote on the next book.* One or two admins also create meetings and move a voted book onto the calendar. The users are adults aged roughly 20–60, reading in Turkish, often in the evening (so dark mode matters) and often one-handed on the way to the meeting.

That gives three design goals: **(1)** the next meeting and the "Geliyorum" (I'm coming) action must be one tap from launch; **(2)** reading-heavy screens (book titles, reviews) must be comfortable to read; **(3)** the app should feel like the club's shared *notebook*, not a generic productivity tool.

2. Visual concept: "Defter" (Notebook)

We chose one visual direction, **Notebook**, in light and dark, and designed it in depth instead of offering several shallow themes. Its grammar maps directly to the club metaphor: **ruled paper** background lines and a red **margin line**; **yellow highlighter labels** (eyebrows) that name each section; **outlined commands** with a yellow offset shadow, like a pen box drawn in a notebook; **ledger rows** for meetings, votes and favorites; and **divided statistics** on the profile. Book covers are slightly tilted, as if placed on a desk. Decoration never carries meaning: every element above is also readable as plain structure.

3. Color palette

Role	Light	Dark	Used for	Contrast (WCAG)
Canvas / Surface	#F9F7F0 / #FFFDF7	#15130F / #211E18	Warm paper, never pure white/black (less glare at night)	n/a
Ink (text)	#172D45	#E9E5DE	Body, headings, outlines of controls	13.1 : 1 / 14.8 : 1
Muted text	#617083	#B8B0A5	Authors, dates, helper text	4.7 : 1 / 8.7 : 1
Action (primary)	#1F5874	#79ADBD	Primary buttons, links, active tab indicator	7.6 : 1 (white on it 7.8 : 1) / 6.8 : 1
Highlight	#FFE16B	#D8C168	Section labels, selected chips, RSVP card	ink on it 10.8 : 1 / 10.4 : 1
Accent / margin	#EC543F, rule #E5A39A	#D17F73	Icons, ratings ★, focus ring, margin line	3.3 : 1 → **non-text only** in light
Hairline border	#B9C7D4	#3B3730	Row dividers only (decorative)	1.6 : 1, never an affordance

Why these colors. Deep blue ink and warm paper read as "notebook" and keep long Turkish text calm; a single strong blue is reserved for *actions*, so users learn "blue = do something". Yellow highlighter marks *where you are* (section, selected option, active tab) rather than what to press, which separates navigation from commands. Red-coral is used sparingly for ratings and the margin. Dark mode is an **independent palette**, not an inversion: action blue becomes a lighter teal (#79ADBD) to stay above 4.5 : 1, and book photos are never inverted.

4. Typography

Bricolage Grotesque · Sıradaki buluşma

Literata · Macide ile Raif Efendi'nin sessizliği…

Bricolage Grotesque (display, 600–700) for headings, labels and tab names: a compact grotesque with character, so uppercase eyebrows stay short on a 390 pt screen. **Literata** (body, 400/600) was designed by Google for long-form e-book reading, which fits reviews and book metadata. Both are open-source

(OFL), ship via `google_fonts`, and fully cover Turkish (ğ ü ş ı İ ö ç).

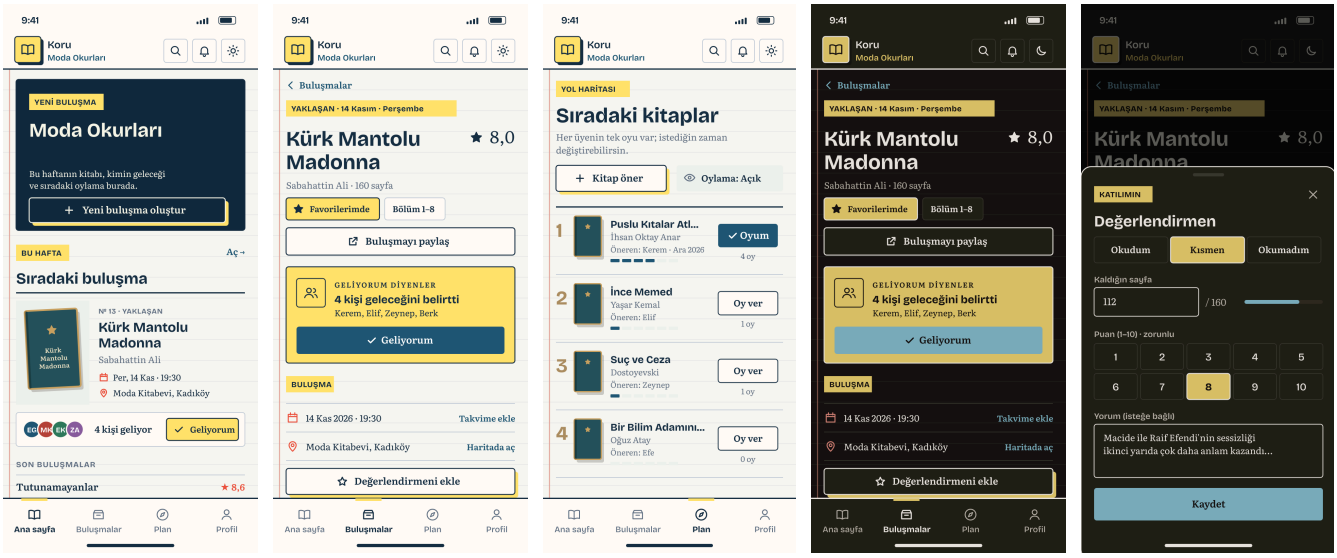

Mobile scale: display 32–36 / h2 24 / title 16–21 / body 14–15 / label 12–13 pt, line-height ≈1.1 for headings and 1.45–1.5 for body. Two families only, with weight (not color) creating hierarchy.

5. Layout and interaction

- **Four-tab bottom navigation** (Ana sayfa · Buluşmalar · Plan · Profil) reachable by thumb; implemented with `go_router`'s `StatefulShellRoute` so each tab keeps its scroll/stack. Active tab = bold label + yellow bar + filled icon (three cues, not color alone).
- **App vs. group identity:** the login screen carries the **Koru** brand, while the app bar shows the selected circle's own name (e.g. "Moda Okurları"). One app, many reading circles.
- **One primary action per screen**: Home → open next meeting; Meeting → "Geliyorum"; Review → "Kaydet"; Plan → vote. Secondary actions use outlined buttons.
- **Review is a bottom sheet** over the meeting, so the user never loses context; required rating is stated in the label ("Puan (1–10) · zorunlu"), enforced again by the Firestore Security Rules.
- 20 pt side margins, 8 pt spacing grid, ledger rows ≥ 64 pt tall; all touch targets ≥ 44×44 pt (Apple HIG) / 48 dp (Material).
- Loading, empty, error and **offline** states are designed for every list (cached data shown with an "çevrimdışı" badge; failed writes are never shown as saved).

6. Accessibility

- All text pairs ≥ 4.5 : 1 and controls/indicators ≥ 3 : 1 in both modes (table above). Interactive controls are outlined in **ink (13 : 1)**, not in the 1.6 : 1 hairline color.
- Selected state is always shape + fill + icon (e.g. ✓ on "Oyum", border on rating "8"), so it works for color-blind users.
- Layouts tolerate system font scale up to 200 % (text wraps; no fixed-height text boxes). Every icon button gets a Turkish `Semantics` label ("Ara", "Bildirimler", "Tema").
- Animations respect `MediaQuery.disableAnimations`; dates use Turkish locale (`intl`, "Per, 14 Kas · 19:30").

Hi-fi mockups (Figma): Home, Meeting detail, Plan (light) · Meeting detail and Review sheet (dark). Same structure, independent palettes.

Implementation note: palette → `ColorScheme` + a `NotebookTheme` `ThemeExtension` (highlight, rule, ledger line), so widgets consume semantic roles, never raw hex values, following a three-layer token contract (palette → semantic roles → components).
